

RAPS GMO POLICY

The food delivered by RAPS is not GMO and was not created from it. Thus it does not have to be labelled pursuant to the regulations EC 1829/2009 and EC 1830/2003 for authorisation, labelling, and traceability of genetically modified food and feed.

Exempted is the coincidental or technically unavoidable contamination with genetically modified material up to a threshold of 0.9% with regard to the ingredient. This also applies to ingredients or additives manufactured with the help of GMO.

RAPS only processes ingredients for which there are confirmations from the suppliers that these raw materials do not consist of GMOs or are made of GMOs. These confirmations are in our quality records and they are current and valid. We require GMO analyses of random samples from our suppliers that attest conformity.

Raps GmbH
